

Coclico: Open Community Convergence for Collaborative Software Development Platforms

Background

Forge platforms, or platforms allowing collaborative software development, were developed to help companies manage the collaborative software development process. The industry needs to promote the further expansion of these platforms along with the community of companies using them.

Innovation

The Coclico project will bring together its partners' experience in forge software. The partners include both forge software users and developers, and include Codendi, NovaForge, Gforge, QualiPSo, InriaForge, Picoforge, and Savane. The project will focus on the following six areas:

- System compatibility and data exchange
- Confidentiality and identity management
- Development of suitable tools and methods
- Traceability and continuous integration
- Integration with customer workstations
- Project marketing

Partners

Corporate

Bull - Orange - Xerox

SME

Bearstech - CeliFrance - Objet Direct

Research laboratories

INRIA - Telecom & Management Sud Paris

Key figures

Budget: €3,3 million

Duration: 24 months

Human resources allocated: 25,62 FTE
